

## Robotics Foundation Web App User Evaluation

Han Meng Loo

The aim of this experiment is to investigate the ease of use of this web app being a potential platform for the robotics foundation students to work on the lab exercises. We cannot tell how good the web app is unless we ask participants for their feedback. I will give you some time to browse the pages to familiarise yourselves before performing a series of tasks. For each completed task, I will ask you some questions relating to it. I will be observing you while you perform the tasks. Please ask questions if you need to.

I will ask you some questions at the end of the experiment. The data collected from this experiment would be your answer. Please remember that it is the web app, not you, that is being evaluated. You are welcome to withdraw from the experiment at any time. Do you agree to taking part in this evaluation? Do you have any questions before we start?
